Omolara Buhari

PROJECT INFORMATION

Project Title: Customer Complaint Analytics

Dataset Used: Bank of America Customer Complaint Dataset

Tool(s) Used: Microsoft Power BI & Excel

Number of Dashboards/Pages Created: 2 pages

Industry: Finance Industry

KEY INSIGHTS & RECOMMENDATIONS

1. Insight:

A total of 62,516 customer complaints were recorded, indicating significant customer dissatisfaction across financial products and services.

Recommendation:

Senior management should establish a continuous complaint monitoring system and integrate complaint analysis into strategic planning to identify recurring service issues and improve customer experience.

Stakeholder:

Executive Management / Strategy Team

2. Insight:

Checking or Savings Accounts recorded the highest number of complaints (24.81K complaints).

Recommendation:

The Product Management and Operations Teams should conduct a detailed review of checking and savings account processes, focusing on account maintenance, fees, transaction delays, and customer communication to reduce complaint volume.

Stakeholder:

Product Management Team, Banking Operations Team

3. Insight:

The most common complaint issue was Managing an Account.

Recommendation:

The Customer Experience Team should simplify account management procedures, improve self-service tools, and provide clearer instructions to customers regarding account updates, restrictions, and transactions.

Stakeholder:

Customer Experience Team, Digital Banking Team

4. Insight:

Companies achieved a strong 93.77% timely response rate, showing effective complaint handling.

Recommendation:

The Customer Service and Compliance Teams should maintain current service standards while investigating the remaining untimely responses to achieve an even higher response performance.

Stakeholder:

Customer Service Team, Compliance Team

5. Insight:

Customer complaints increased steadily from 2017 to 2022, before declining slightly in 2023.

Recommendation:

The Business Intelligence Team should conduct root cause analysis to understand the factors that drove complaint growth and use predictive analytics to anticipate future spikes in complaints.

Stakeholder:

Business Intelligence Team, Risk Management Team

6. Insight:

Most complaints were submitted through the Web Channel, indicating a strong customer preference for digital communication.

Recommendation:

The Digital Services Team should continue investing in web-based complaint platforms, improving user interface design, tracking features, and automated acknowledgment systems.

Stakeholder:

Digital Services Team, IT Department

7. Insight:

California recorded the highest number of complaints, followed by Florida, Texas, and New York.

Recommendation:

Regional Operations and Compliance Teams should prioritize these high-complaint states for targeted investigations, customer outreach, and process improvement initiatives.

Stakeholder:

Regional Operations Team, Compliance Team

8. Insight:

Most complaints were resolved by providing explanations, while relatively few resulted in monetary or non-monetary relief.

Recommendation:

The Complaint Resolution Team should assess whether explanatory responses are adequately addressing customer concerns and determine when compensation or corrective actions may be more appropriate.

Stakeholder:

Complaint Resolution Team, Customer Advocacy Team

OVERALL SUMMARY OF RECOMMENDATIONS

Most recommendations focus on reducing customer complaints, improving account management processes, strengthening digital complaint channels, maintaining timely response performance, and addressing high-complaint products and regions. These actions will help financial institutions enhance customer satisfaction, improve operational efficiency, and make more informed, data-driven decisions.
